EDUCATION

XIM University Bachelor of Technology Computer Science & Engineering	<i>June 2019 - Present</i> Semester 4 - 9.79 CQPI
Sai International School, Class XII Higher Secondary School	<i>April 2019</i> 91.6 %
Sai International School, Class X High School	<i>March 2017</i> CGPA 10

EXPERIENCE

Knowledge Lens Backend Developer Intern <i>Flask, ArangoDB, Minio, PySpark</i>	<i>Bengaluru - Remote</i> <i>May 2021 - July 2021</i>
<ul style="list-style-type: none">Designed services & handlers for intranet portal and dashboard graph report.Built a program to periodically backup data from server & notify the admin via email.Created automation scripts for database manipulation & extracting data from files into JSON format.	

ACHIEVEMENTS & POSITIONS OF RESPONSIBILITY

- Coordinator** of Xplore, The Computing Society at University *June 2021 - Present*
- Contributed** to Open Source Projects in Hacktoberfest 2020
- Digital & Technology **Advisor** at Yuva Utkal Foundation *May 2020 - Feb 2021*
- Winner** of Trithon Hackathon 2020 among 160 teams.
- Worked as Joint IT **Director** of Technology for organizing Xuphoria 2020.
- President** of Xplore Coding & Circuit Club at University *Dec 2019 - Nov 2020*
- Zonal Excellence** in IMO conducted by SOF in 2018.
- Selected for **district level** in Children's Science Congress 2015.
- All India topper** in Grade 2 Band Based Keys conducted by Rockscool in 2015.

SKILLS

Programming Languages	• Python • JavaScript • C/C++ • Java
Web Languages	• HTML5 • CSS3 • PHP
Frameworks	• React • Flutter • React Native
DBMS	• MySQL • MongoDB • ArangoDB
Technologies & Tools	• Git • Bash • NodeJS • Android • L ^A T _E X

PROJECTS

- IoT Dashboard:** IoT Dashboard is a real-time web application made using ReactJS, NodeJS, ExpressJS & MongoDB. Data is generated by sensor(s) in raspberry pi and sent to the Node server via WebSockets. The server then, broadcasts the data to all the connected React clients and the sensor data gets displayed on the dashboard in real-time. The app consists of admin login, Chart.js integration for displaying real-time data graph and text-based data components.
- ChatQube:** ChatQube is a chatting web application made using ReactJS, NodeJS, ExpressJS & MongoDB. All registered users show up in the search list and users can create groups with other members. There is a caching system in place to optimize the number of requests to the server and to decrease loading times of the clients.
- Anime Heaven:** An anime video streaming website made using HTML, CSS, JavaScript, PHP & MySQL. Some of the included features are searching for movies in database, registration & login page, account page, admin page, dynamic data fetching & displaying on the home page.
- CertBot:** CertBot is a certificate maker bot. It requires a master certificate in .pptx format with placeholders for name and date and an excel file containing the data. It then generates the certificates in .pptx format, converts them to .pdf format into an output folder. This bot eliminates the unnecessary human effort required to create bulk certificates.

- **Cube Showdown:** An arcade game where the player is represented by a blue block and has to avoid obstacles to progress through the levels in the game. It was developed using Unity Game Engine and C# in Visual Studio.

CERTIFICATION

- **Full-Stack Web Development with React Specialization** by The Hong Kong University of Science and Technology at Coursera
- **Open Source Software Development, Linux and Git Specialization** by The Linux Foundation at Coursera
- **Deep Learning Specialization** by deeplearning.ai at Coursera
- **An Introduction to Programming the Internet of Things (IOT) Specialization** by University of California, Irvine at Coursera
- **Full Stack Web and Multiplatform Mobile App Development Specialization** by The Hong Kong University of Science and Technology at Coursera
- **Data Science with Python** course at DataCamp
- **Getting Started with Go** by University of California, Irvine at Coursera
- **The Unix Workbench** by Johns Hopkins University at Coursera
- **AWS Fundamentals Specialisation** at Coursera
- **Getting Started with Google Kubernetes Engine** by Google Cloud at Coursera
- **Python 3 Programming Specialization** by University of Michigan at Coursera
- **Version Control with Git** course by Atlassian at Coursera
- **Automate the Boring Stuff with Python Programming** course at Udemy

PARTICIPATION

- **Honorable Mention** in 2019 ICPC Asia Kharagpur First Round Online Programming Contest
- **Pre-Qualifiers** in International Space Apps Challenge 2019
